

Summary

20 years of experience in planetary science and building space instrumentation. Participated in 6 space missions as part of the principal investigator's team. Lead scientist and grant owner for the FREND experiment. Experience in spacecraft operations, rover and orbiters. Lead for ground operations and data processing system. Project management for FREND instrument onboard ESA's ExoMars Trace Gas Orbiter (development, testing and integration, flight), ESA's PILOT-D instrument integration onboard LUNA-25 mission (interface control, testing and integration). Software engineer.

Work Experience

Space Research Institute, Moscow

(Leading research facility in Russia for planetary science and development of space instrumentation, 1000+ employees)

2016 – 2022: Senior Scientist

2012 – 2015: Project Leader

2003 – 2012: Software Developer

Education

2010: PhD in Physics and Mathematics

[Joint Institute for Nuclear Research, Dubna](#)

2005 – 2008: PhD course

[Space Research Institute, Moscow](#)

2000 – 2005: Master's in Software Engineering

[Moscow Tech. Uni. for Comm. and Informatics](#)

Awards:

- 7 NASA Group Achievement Awards
- 2 ESA Awards
- K. E. Tsiolkovsky medal

Languages:

English – advanced
French – fluent
Russian – native

Personal Characteristics:

Result oriented · decision making · accountability · leadership without authority · quick learner · build and manage interpersonal relations · flexibility to adapt to change and cultural realities · confidence and commitment · pro-active · can-do attitude · open minded · trustworthy

Projects

- [FREND](#). Fine Resolution Epithermal Neutron Detector, ESA's ExoMars Trace Gas Orbiter.
- [LUNA-25](#). Roscosmos' LUNA-25 mission.
- [PILOT-D](#). ESA's camera for LUNA-25.
- [LEND](#). Lunar Exploration Neutron Detector, NASA's Lunar Reconnaissance Orbiter.
- [DAN](#). Dynamic Albedo of Neutrons, NASA's Curiosity Mars rover.
- [MGNS](#). Mercury Gamma-ray and Neutron Spectrometer, ESA's BepiColombo.
- [HEND](#). High Energy Neutron Detector, NASA's Mars Odyssey.
- [BTN-M1](#) and [M2](#). Onboard Telescope for Neutrons instruments, the ISS.
- [ADRON-RM](#). Passive neutron detector, ESA's ExoMars Rosalind Franklin rover.
- [ADRON-EM](#). Active neutron detector, Roscosmos' ExoMars Kazachok lander.
- [ADRON-LR](#). Active neutron detector, Roscosmos' LUNA-25.
- [NS-HEND](#). Neutron Spectrometer – High Energy Neutron Detector, Roscosmos' Phobos-Grunt.

Skills

Management: MS Office, MS Project, Jira, Trello, Redmine. Team's workflow control. Software and hardware development life cycle. Project planning and execution. Technical and contractual documentation. Contractual work. Problem solving.

Science: data processing, data mining/manipulations, data visualization (graphs, maps, charts). Analysis, correlation, and comparison of different datasets. Achievement of publishable scientific results. Drafting of peer-reviewed paper texts, review process. Conferences abstracts. Peer review of science grants.

Technical: software development with C++/C/C#, Java, Python, IDL. Databases in MSSQL/Postgres/MySQL, software tools for data manipulation. Visualization tools (IDL, GMT). Windows and Linux advanced user and administrator. Website core technologies (JS, PHP, HTML, CSS) for user interfaces. Version control for code in Git, Bitbucket.

Media appearances:

[ESA.int](#) · [Vesti24](#) · [Nauka TV](#) · [RTVI](#) · [NTV](#) and many more.

Publications

[60 papers](#) in peer-reviewed journals. [145 conference abstracts](#).

[WOS H-Index: 24](#)

[Scopus H-Index: 23](#)

Achievements

Project Management

- Lead development, testing and integration of the [FREND](#) instrument for ESA's TGO: workflow organization, spacecraft interfaces (mechanical, electrical, thermal, EMC) control, quality assurance, testing and validation planning and execution, physical calibration campaigns execution, contractual work.
- Delivered support for ESA's [PILOT-D](#) instrument integration onboard Roscosmos' LUNA-25 lander. Supervised and verified interface control documentation to match spacecraft requirements, point of contact for ESA and the Russian industry, supported ESA's testing campaign (control of test procedures and test reports), administered integration and testing onboard the spacecraft in Russia.

Scientific Research

- Leading scientist for the [FREND](#) experiment.
- Conducted scientific data analysis to achieve publishable scientific results. Possess data visualization skills (data preparation, graphing, mapping). Put together scientific paper texts and handled journal peer review. Reported research results in scientific conferences with oral abstracts, public outreach events, lectures etc. Interfaced with the mission's international science team.
- Won, conducted, and concluded a Russian Science Foundation [grant](#) for research on [FREND](#) data.
- Provided science data archiving (to [NASA's PDS](#) and [ESA's PSA](#)), both on the science side (definition of data products and algorithms) and on the technical side (data retrieval/ingestion software).
- Profound knowledge of the Interactive Data Language ([IDL](#)), Generic Mapping Tools ([GMT](#)), [SPICE](#) library.
- Delivered peer reviews for scientific grants proposals and reports for the [Russian Science Foundation](#) and the [Federal Research Centre for Projects Evaluation and Consulting Services](#).

Technical Lead

- Supervised architecture and development of the [LUNA-25](#) science ground segment, a software system handling operations planning, sequencing, and real-time data processing. This system provides user interface to build and verify operational plans, considers operational constraints, ingests instrument sequences, and exports it to a format required by the spacecraft. Backend provides plans and sequences storage, mechanisms for validation and export, incoming data processing, distribution and quick visualization tools.
- Built technical requirements for the system and maintained traceability matrix. Drafted interface documentation to manage interaction with external spacecraft systems.
- Responsible for developer team workflow management, tasks review, testing/validation of the system.

Spacecraft Operations

- Conducted ground and flight operations of [HEND](#), [BTN-M1](#), [LEND](#), [DAN](#), [MGNS](#), [FREND](#) instruments.
- Developed, validated, and tested instruments' command sequences during scientific operations planning.
- Performed daily flight data receipt and technical analysis to monitor instruments' health and performance.
- Representative of [DAN](#) instrument in NASA's MSL ([Curiosity rover](#)) for daily operations together with the MSL science team: planning, sequencing, validation, data receipt and analysis.
- Technically led Roscosmos' [LUNA-25](#) science instruments operations: provided scientific and technical operational planning, interaction with instrument teams, development, testing and validation of complex ground and flight sequences. Created fault detection, isolation and recovery algorithms, onboard data management rules.

Software Development

- Delivered software for ground support equipment (GSE) in [BTN-M1](#) and [M2](#), [LEND](#), [DAN](#), [FREND](#), [MGNS](#) projects (embedded Linux environments). This software operates within a custom-built hardware, including low-level interactions with it. GSE mimics power and data interfaces of a spacecraft for the instrument, allowing control and data acquisition, and is used during development and testing phases.
- Created an architecture and implemented scientific databases for storage and handling of [BTN-M1](#), [LEND](#), [DAN](#), [FREND](#), [MGNS](#) data (MSSQL, Postgres, MySQL). These databases store low- and high-level data of the instruments, and some auxiliary data. Database architecture and user tools were designed to support full life cycle of instruments, starting from development and testing stage, and up to flight data handling. User tools allow ingestion of raw and auxiliary data into the database, its querying according to user's demands.
- Created data visualization software for [BTN-M1](#), [LEND](#), [DAN](#), [FREND](#), [MGNS](#) instruments for Windows environment, with files or database as inputs. The software performs low-level processing of the instrument data and provides visualization for quick-look analysis of the instrument's health and performance.

Scientific Interests

My main interest is in planetary science, specializing in remote sensing for hydrogen/water content in the upper regolith layer of a celestial body's by means of neutron flux measurements. I did most of the research on the hydrology of Mars and the Earth's Moon based on data from orbital and rover instruments. My expertise lies in creation of methods and models for neutron data processing and deconvolution, data mapping, regional analysis, cross-dataset correlation methods.

Awards

- 2010 – NASA Group Achievement Award to the Lunar Reconnaissance Orbiter Team
- 2011 – NASA Group Achievement Award to LRO Mission Operations Team
- 2011 – NASA Group Achievement Award to the Lunar Reconnaissance Orbiter Exploration
- 2013 – NASA Group Achievement Award to MSL DAN Instrument Development and Science Team
- 2013 – NASA Exceptional Achievement Award to the LRO Science Mission Team
- 2015 – NASA Group Achievement Award to MSL Prime Mission Science and Operations Team
- 2016 – ESA Award in recognition of outstanding contribution to the ExoMars 2016 mission
- 2016 – K. E. Tsiolkovsky Medal of Russian Federation of Cosmonautics
- 2017 – NASA Group Achievement Award to MSL Extended Mission-1 Science and Operations Team
- 2018 – ESA Award in recognition of outstanding contribution made to the BepiColombo mission
- 2019 – Star City Administration Award for participation in "Gagarin's Lesson" event
